

Route decision: Port of Shanghai → Port of Los Angeles

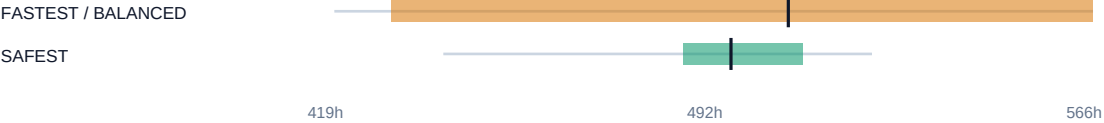

PORT-SHANGHAI → PORT-LOSANGELES · mode sea (STRICT) · cargo general · priority normal · scenarios: LA_PORT_STRIKE · planned 2026-09-29 13:47 UTC

Recommendation: FASTEST / BALANCED, SEA via direct. Expected arrival in **430 h** (17.9 days); plan for 507 h (p85), worst case 566 h (p95). Cost: freight ¥271,422. Peak leg risk 90%.

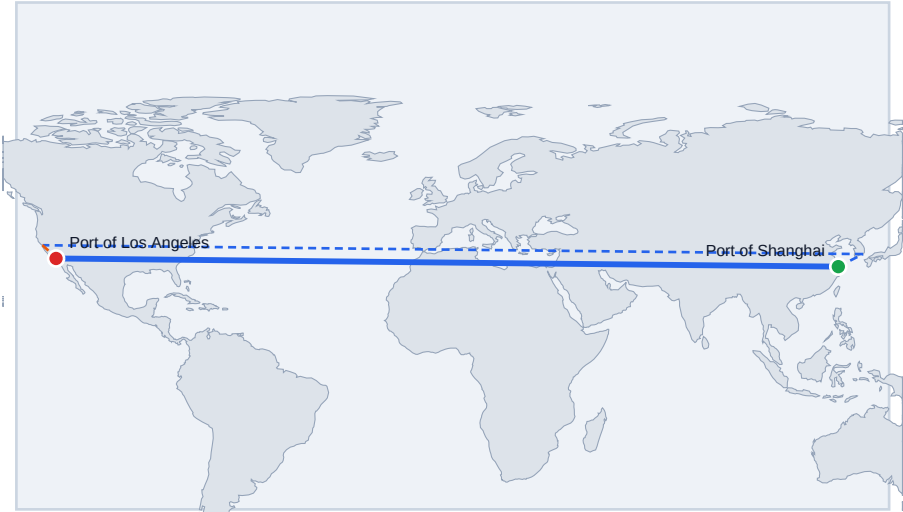

Options

Option	Mode	Via	Plan h	p50 h	p85 h	p95 h	Freight	Risk
FASTEST / BALANCED	SEA	direct	419	430	507	566	¥271,422	90%
SAFEST	SEA	direct	440	486	496	509	¥427,589	90%

ETA bands (bar p50–p95, tick p85, line plan → fully-correlated worst case)

Routes

Recommended route solid, alternatives dashed. Blue sea, amber air, green rail, orange road.

FASTEST / BALANCED: SEA via direct

SEA via no chokepoints; expected 429.8 h (p85 506.7 h, p95 565.7 h), ¥271,422 freight, 0 handoffs. 56.5 h faster than the next option. ¥156,214 cheaper (freight) than the lowest-cost alternative. Includes 120.0 h announced scenario delay.

#	Mode	To	km	Hours	Delay p85	Cost	Risk	Signal
1	SEA	Port of Los Angeles	10,457	418.8	+88.0	¥246,747	90%	SCENARIO: Terminal labor strike. Picket lines at all major berths. Throughput at 0%.

Transit 298.8 h + transfers 0.0 h + announced scenario delay 120.0 h = plan 418.8 h. Model delay buffer p50/p85/p95: +11.1 / +88.0 / +146.9 h. Route band p50 429.8 h, p85 506.7 h, p95 565.7 h (independent legs); 565.7 h if all legs are late together. Costs: linehaul ¥246,747, transfers ¥0, disruption surcharge ¥24,675.

Why the slowest leg (PORT-SHANGHAI → PORT-LOSANGELES, p85 208.0 h) is slow: exact Shapley attribution of the p85 delay model, hours relative to a 28.9 h baseline

SAFEST: SEA via direct

SEA via no chokepoints; expected 486.3 h (p85 495.6 h, p95 509.4 h), ¥427,589 freight, 2 handoffs. 56.5 h slower than FASTEST. ¥156,214 more (freight) than FASTEST. Includes 120.0 h announced scenario delay.

#	Mode	To	km	Hours	Delay p85	Cost	Risk	Signal
1	SEA	Port of Busan	824	23.5	+26.6	¥19,447	0%	
2	SEA	Port of Oakland	9,080	259.4	+27.5	¥214,255	0%	
3	handoff	Port of Oakland		14.0	+0.0	¥39,329	8%	
4	ROAD	San Francisco Logistics Park	13	0.2	+3.6	¥2,371	0%	
5	ROAD	LA Logistics Cluster	559	8.2	+3.6	¥105,549	0%	
6	ROAD	Port of Los Angeles	35	120.5	+0.0	¥6,643	90%	SCENARIO: Terminal labor strike. Picket lines at all major berths. Throughput at 0%.
7	handoff	Port of Los Angeles		14.0	+0.0	¥39,329	8%	

Transit 291.9 h + transfers 28.0 h + announced scenario delay 120.0 h = plan 439.9 h. Model delay buffer p50/p85/p95: +46.4 / +61.4 / +83.0 h. Route band p50 486.3 h, p85 495.6 h, p95 509.4 h (independent legs); 522.9 h if all legs are late together. Costs: linehaul ¥348,267, transfers ¥78,658, disruption surcharge ¥664.

Why the slowest leg (PORT-BUSAN → PORT-OAKLAND, p85 27.5 h) is slow: exact Shapley attribution of the p85 delay model, hours relative to a 28.9 h baseline

Method: legs are priced with gradient-boosted quantile models (p50/p85/p95) trained on synthetic delays fitted to published UNCTAD, World Bank and STB statistics; FASTEST plans on p50, BALANCED on p85 (plus cargo carrying cost when a value is given), SAFEST on p95 plus 240 risk-hours per unit of threat. Route bands assume independent legs. Sea distances are great-circle between chokepoint waypoints. Currency conversion: live (open.er-api.com) as of Tue, 29 Sep 2026 00:02:31 +0000.
