FASTEST: SEA via Malacca, Babel, Suez, Gibral

SEA via Malacca, Babel, Suez, Gibral; expected 635.0 h (p85 660.5 h, p95 682.1 h), \$2,729 freight, 0 handoffs. 8.4 h faster than the next option. \$385.00 cheaper (freight) than the lowest-cost alternative.

Transit 519.7 h + transfers 0.0 h + announced scenario delay 0.0 h = plan 519.7 h. Model delay buffer p50/p85/p95: +115.3 / +158.6 / +208.2 h. Route band p50 635.0 h, p85 660.5 h, p95 682.1 h (independent legs); 727.9 h if all legs are late together. Costs: linehaul \$2,729, transfers \$0.00, disruption surcharge \$0.00.

Why the slowest leg (CHOKE-GIBRAL → PORT-ROTTERDAM, p85 55.3 h) is slow: exact Shapley attribution of the p85 delay model, hours relative to a 28.9 h baseline

SAFEST / BALANCED: SEA via Malacca, Babel, Suez, Gibral

SEA via Malacca, Babel, Suez, Gibral; expected 643.4 h (p85 657.4 h, p95 678.6 h), \$3,114 freight, 2 handoffs. 8.4 h slower than FASTEST. \$385.00 more (freight) than FASTEST.

Method: legs are priced with gradient-boosted quantile models (p50/p85/p95) trained on synthetic delays fitted to published UNCTAD, World Bank and STB statistics; FASTEST plans on p50, BALANCED on p85 (plus cargo carrying cost when a value is given), SAFEST on p95 plus 240 risk-hours per unit of threat. Route bands assume independent legs. Sea distances are great-circle between chokepoint waypoints. Currency conversion: live (open.er-api.com) as of Tue, 29 Sep 2026 00:02:31 +0000.
