Transit 171.8 h + transfers 0.0 h + announced scenario delay 0.0 h = plan 171.8 h. Model delay buffer p50/p85/p95: +61.8 / +83.5 / +115.0 h. Route band p50 233.6 h, p85 246.1 h, p95 264.5 h (independent legs); 286.8 h if all legs are late together. Costs: linehaul \$901.88, transfers \$0.00, disruption surcharge \$0.00.

Why the slowest leg (CHOKE-MALACCA → PORT-SINGAPORE, p85 28.4 h) is slow: exact Shapley attribution of the p85 delay model, hours relative to a 28.9 h baseline

Method: legs are priced with gradient-boosted quantile models (p50/p85/p95) trained on synthetic delays fitted to published UNCTAD, World Bank and STB statistics; FASTEST plans on p50, BALANCED on p85 (plus cargo carrying cost when a value is given), SAFEST on p95 plus 240 risk-hours per unit of threat. Route bands assume independent legs. Sea distances are great-circle between chokepoint waypoints. Currency conversion: live (open.er-api.com) as of Tue, 29 Sep 2026 00:02:31 +0000.
