

Route decision: Port of Shanghai → Port of Los Angeles

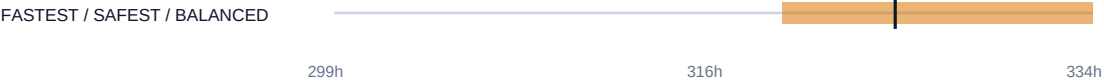

PORT-SHANGHAI → PORT-LOSANGELES · mode sea (STRICT) · cargo general · priority normal · scenarios: none · planned 2026-09-29 13:47 UTC

Recommendation: FASTEST / SAFEST / BALANCED, SEA via direct. Expected arrival in **319 h** (13.3 days); plan for 325 h (p85), worst case 334 h (p95). Cost: freight €1,379. Peak leg risk 0%.

Options

Option	Mode	Via	Plan h	p50 h	p85 h	p95 h	Freight	Risk
FASTEST / SAFEST / BALANCED	SEA	direct	299	319	325	334	€1,379	0%

ETA bands (bar p50–p95, tick p85, line plan → fully-correlated worst case)

Routes

Recommended route solid, alternatives dashed. Blue sea, amber air, green rail, orange road.

FASTEST / SAFEST / BALANCED: SEA via direct

SEA via no chokepoints; expected 319.4 h (p85 324.6 h, p95 333.7 h), €1,379 freight, 0 handoffs.

#	Mode	To	km	Hours	Delay p85	Cost	Risk	Signal
1	SEA	Port of Los Angeles	10,457	298.8	+25.8	€1,379	0%	

Transit 298.8 h + transfers 0.0 h + announced scenario delay 0.0 h = plan 298.8 h. Model delay buffer p50/p85/p95: +20.6 / +25.8 / +35.0 h. Route band p50 319.4 h, p85 324.6 h, p95 333.7 h (independent legs); 333.7 h if all legs are late together. Costs: linehaul €1,379, transfers €0.00, disruption surcharge €0.00.

Why the slowest leg (PORT-SHANGHAI → PORT-LOSANGELES, p85 25.8 h) is slow: exact Shapley attribution of the p85 delay model, hours relative to a 28.9 h baseline

Method: legs are priced with gradient-boosted quantile models (p50/p85/p95) trained on synthetic delays fitted to published UNCTAD, World Bank and STB statistics; FASTEST plans on p50, BALANCED on p85 (plus cargo carrying cost when a value is given), SAFEST on p95 plus 240 risk-hours per unit of threat. Route bands assume independent legs. Sea distances are great-circle between chokepoint waypoints. Currency conversion: live (open.er-api.com) as of Tue, 29 Sep 2026 00:02:31 +0000.
