

Route decision: Jebel Ali Port → Port of Singapore

PORT-JEBEL → PORT-SINGAPORE · mode sea (STRICT) · cargo general · priority normal · scenarios: HORMUZ_CLOSURE · planned 2026-09-29 13:47 UTC

Recommendation: FASTEST / SAFEST / BALANCED, SEA via Malacca. Expected arrival in **237 h** (9.9 days); plan for 247 h (p85), worst case 263 h (p95). Cost: freight £1,186. Peak leg risk 8%.
Hold vs reroute: waiting at CHOKE-HORMUZ for reopening would arrive at p50 397 h, 160 h later than the best reroute → **REROUTE**.

Transit 164.8 h + transfers 28.0 h + announced scenario delay 0.0 h = plan 192.8 h. Model delay buffer p50/p85/p95: +43.8 / +59.6 / +82.7 h. Route band p50 236.6 h, p85 247.1 h, p95 262.8 h (independent legs); 275.4 h if all legs are late together. Costs: linehaul £808.47, transfers £377.23, disruption surcharge £0.00.

Why the slowest leg (CHOKE-MALACCA → PORT-SINGAPORE, p85 28.4 h) is slow: exact Shapley attribution of the p85 delay model, hours relative to a 28.9 h baseline

Method: legs are priced with gradient-boosted quantile models (p50/p85/p95) trained on synthetic delays fitted to published UNCTAD, World Bank and STB statistics; FASTEST plans on p50, BALANCED on p85 (plus cargo carrying cost when a value is given), SAFEST on p95 plus 240 risk-hours per unit of threat. Route bands assume independent legs. Sea distances are great-circle between chokepoint waypoints. Currency conversion: live (open.er-api.com) as of Tue, 29 Sep 2026 00:02:31 +0000.
